AB - J63044895 Monoclonal antibody which reacts with amyloid A protein and
a peptide of His-Ala-Arg-Gly-Asn-Tyr- Asp-Ala-Ala-Lys-ARg and which
does not react with peptides of Arg-Ser-Phe-Phe-Ser-Phe-Leu-Gly-Glu-A
la-Phe-Asp, Glu-Ala-Ile-Ser-Ala- Arg-Glu-Asn-Ile-Gln,
Gln-Arg-Phe-Phe-Gly- His-Gly-Ala-Glu-Asn-Ser and
Arg-Asp-Met-Trp-Arg-Ala-Tyr-Ser-Asn-Met -Arg.
- Amyloid A protein has 76 amino acid residues. Synthetic peptides of
Arg 1 to Asp 12 (Arg-Ser-Phe-Phe-Ser-Phe- Leu-Gly-Glu-Ala-Phe-Asp),
Arg 15 to Arg 25 (Arg-Asp-Met-Trp-Arg- Ala-Tyr-Ser-Asn-Met-Arg), His
37 to Arg 47 (His-Ala-Arg-Gly-Asn-Tyr-Asp-Ala-Ala-Lys-Arg), Glu 56 to
Gln 66 (Glu-Ala-Ile-Ser-Asp- Ala-Arg-Glu -Asn-Ile-Gln) and Gln 66 to
Ser 76 (Gln-Arg-Phe-Phe-Gly-His-Gly-Ala-Glu-Asn-Ser), which is named
peptide 1, peptide 2, peptide 3, peptide 4 and peptide 5, respectively
are used to immunise mouse.
- USE/ADVANTAGE - Amyloid A protein is recognised in almost all
secondary amyloidosis and a part of genetic amyloidosis. This antibody
reacts with amyloid A protein, esp. His 37 to Arg 47 of the A protein
and, therefore, is useful for detection of secondary amyloidosis.(0/0)
